Computer Management Information Systems (0116)

Mission Statement

The mission of the Computer Management Information Systems Associate in Applied Science degree is to prepare students for entry into the job market as computer specialists or entry level software developers while providing the student with the prerequisite knowledge to transfer to a senior institution. Student assessment will be used to identify and implement methods and strategies to promote life-long educational growth of individuals and the subsequent improved enrichment of their lives.

Educational Goals

The Computer Management Information Systems degree at Southwestern Illinois College will graduate students that can:

1. Develop software applications using various, current software development tools.
2. Achieve fluency in several object oriented programming languages.
3. Communicate fluently about technical support related topics with technical and non-technical audiences.
4. Use critical thinking skills to respond creatively to computer related issues and challenges.
5. Articulate the value of computer information systems and how the community can benefit from them.
