

Construction Bricklayer Mission

The mission of the Construction Bricklayer Program is to provide the local construction industry with well-trained, productive, and educated bricklayers, capable of cooperation with other jobsite tradespersons, effecting profitability for their employers, and contributing to the well being of their community.

The Construction Bricklayer Program is designed to prepare students for excellence in their trade through maximizing their knowledge and efficiency on the jobsite. They are encouraged to further their education, enabling them to take a leadership position as they realize their potential to become managers and company owners in a complex industry.

Through a system that assesses the performance and progress of each student during the pursuit of his/her professional development, the program ensures that its students learn what the profession requires.

Educational Goals

1. The student, with the base of construction knowledge provided in this program, will be enabled, as a journeyman, to work on a project with other crafts in a cooperative manner.
2. The student will perform on the jobsite with improved safety procedures resulting in reduction of lost-time accidents due to poor safety practices.
3. The student bricklayer will have developed the oral and written communication skills necessary to function as productive member of the bricklayer team.
4. The student will apply knowledge that will enhance skills in the use of power tools, hand tools, and jobsite equipment such as man lifts, fork trucks, cranes and other power equipment.
