

Southwestern Illinois College Radiologic Technology Program

Mission

The Radiologic Technology Program upholds the dignity and worth of all people and believes that learning is a lifelong process that enhances the quality of life. The program provides a comprehensive curriculum that meets or exceeds state and national standards for certification and licensure.

The curriculum instills and enhances the intellectual, psychomotor, and affective qualities of students giving them the basics necessary to successfully complete the program and graduate with an Associate of Applied Science degree, pass the registry examination, and obtain employment in the profession as an entry-level radiographer within six months of graduation. Through a system that assesses the performance and progress of each student during the pursuit of his/her professional development, the program ensures that its students learn what the profession requires of radiographers as it relates to clinical competency, communication, problem solving and professional development.

Goals

Programs goals related to students:

Goal #1: Student will be clinically competent as an entry-level professional.

Goal #2: Student will utilize critical thinking skills.

Goal #3: Student will have effective communication skills.

Goal #4: Students will participate in professional development activities.

Programs goals related to faculty:

Goal #5: Faculty will monitor program effectiveness.
