

Web Development & Administration (0011)

Mission Statement

The Web Development & Administration program at Southwestern Illinois College provides students with the knowledge and skills required for positions in web development and administration. The program promotes lifelong learning and continually assesses student learning, making necessary modifications in teaching as indicated to best prepare students for this career.

Educational Goals

The Web Development & Administration degree at Southwestern Illinois College will graduate students who can:

1. Create and publish responsive Web pages using both client and server side technology that follow the web standards published by the World Wide Web Consortium (W3C).
2. Program using a variety of current web standard and client/server-side scripting languages.
3. Create dynamic, database-driven web sites.
4. Demonstrate knowledge of operating systems and the structure and function of a web server.

Division: Business Division
